The International Union of Pure and Applied Chemistry (IUPAC), formed in 1919, is a voluntary non-governmental, non-profit association of organizations, each of which represents the chemists of a member country.

Its objectives are:

- to promote continuing co-operation among the chemists of the member countries
- to study topics of international importance to pure and applied chemistry which need standardization, or codification
- to co-operate with other international organizations which deal with topics of a chemical nature
- to contribute to the advancement and understanding of pure and applied chemistry in all its aspects

The membership of IUPAC presently comprises 42 countries, each represented by a national organization, such as an academy of science or research council.
